

FOR IMMEDIATE RELEASE

Sullair Guarantees the Quality of Compressed Air

Michigan City, IN, September 2008—Sullair Corporation, a business unit of Hamilton Sundstrand, a United Technologies Company, is pleased to publish its exclusive Air Quality Guarantee. The first of its kind in the industry, the Sullair Air Quality Guarantee assures that compressed air from the Sullair System (provided it is operated and maintained according to the manufacturer's recommendations) will meet specific performance levels throughout the Systems operating life. According to Britt Shipley, Sullair Product Manager, "The air quality guarantee shows our customers the confidence we have in our contaminant removal equipment to provide the highest quality compressed air."

Two Levels of Quality

Recognizing that the requirements for air quality vary by application, Sullair provides compressed air systems that achieve two distinct levels of air quality, and backs each with an exclusive purchase refund guarantee. With the Sullair Air Quality Guarantee, compressed air users can now select the quality level that best meets their plant air or processing requirements and can be assured that the quality produced by the System they specify will remain consistent for the life of the equipment. Mr. Shipley affirmed, "We are so certain of the air quality we can provide, that we will reimburse the buyer for the full purchase price if we don't meet or exceed our published air quality guarantee."

The Sullair System

The Sullair System matches a Sullair compressor, a Sullair dryer and Sullair filters. Sullair assures that its System will meet specific performance levels throughout its operational life. We offer a one-year test/review period, backed by a purchase refund guarantee, to verify the performance of the Sullair System.

The Sullair Oil-Free Air Quality Guarantee

The System consists of a Sullair compressor, Sullair dryer, and Sullair SCF and SCH or PF/PH filters. The compressed air from this system contains particulates no larger than .01 micron, including coalesced liquid water and lubricants. Maximum remaining oil aerosol content is 0.01 parts per million by weight (ppm/w) @ 70°F, including oil vapor. The air from this Sullair System meets the most stringent ISO standard for air quality: ISO 8573.1, Class 1 for oil vapor and Class 2 for particulate. Mr. Shipley stated, "Many customers assume they need an oil free compressor to get clean, dry air. This is simply not true with the air treatment products that Sullair has to offer."

The Sullair Critical Air Quality Guarantee

By adding Sullair SCC or PC filters, the compressed air from this Sullair System **exceeds** the ISO standard: ISO 8573.1, Class 1 for oil vapor and Class 2 for particulate. The odor-free compressed air from this system contains particulates no larger than 0.01 micron, including water and oil aerosol content of 0.01 parts per million by weight (ppm/w) @ 70°F. The remaining oil vapor content is less than 0.003 ppm/w.

Sullair is one of the world's leading compressor manufacturers, and is the only air compressor manufacturer to concentrate exclusively on rotary screw technology. Sullair has been an industry leader and innovator since 1965. With subsidiaries in France, China and Australia, Sullair is also a globally recognized manufacturer of compressed air contaminant removal equipment, vacuum systems, portable compressors, and contractors' air tools.
